

FAST SIMULATION OF THE UPGRADED PID DEVICE

Rok Pestotnik

J. Stefan Institute

July 30, 2003

PID upgrade meeting

The fast simulation of the PID device will do the following:

- ◆ use generated track information as input
- ◆ as output return likelihoods for individual particle hypotheses

What was changed with respect to the previous version (05/29 meeting)?

→ Digitization, reconstruction: out (→ full simulation)

The program becomes much faster.

Timing

Reference machine f9pc43.ijs.si

vendor id : AuthenticAMD

model name : AMD Athlon(tm) XP processor 2100+

cpu MHz : 1733.470

cache size : 256 KB

RAM : 512MB

OS: RedHatLinux 8.0 kernel Linux release 2.4.18

compiler: gcc version 2.95.2

05/29 status

CPU usage for 10000 events:

Total 12.12 s

→ not fast enough

07/30 status:

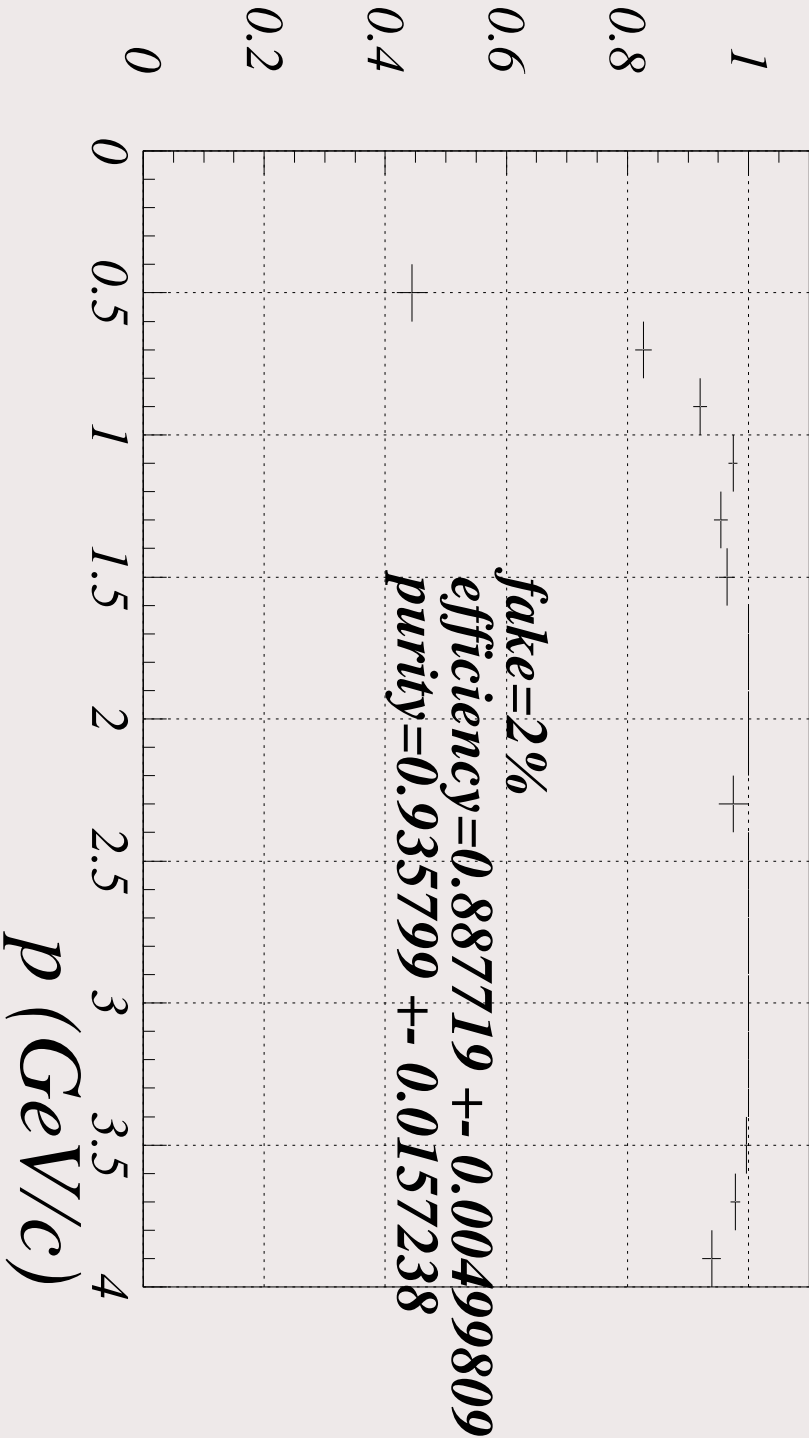

CPU usage for 10000 events:

Total fast simulation 0.74 s

Fast simulation, some results

π/K separation

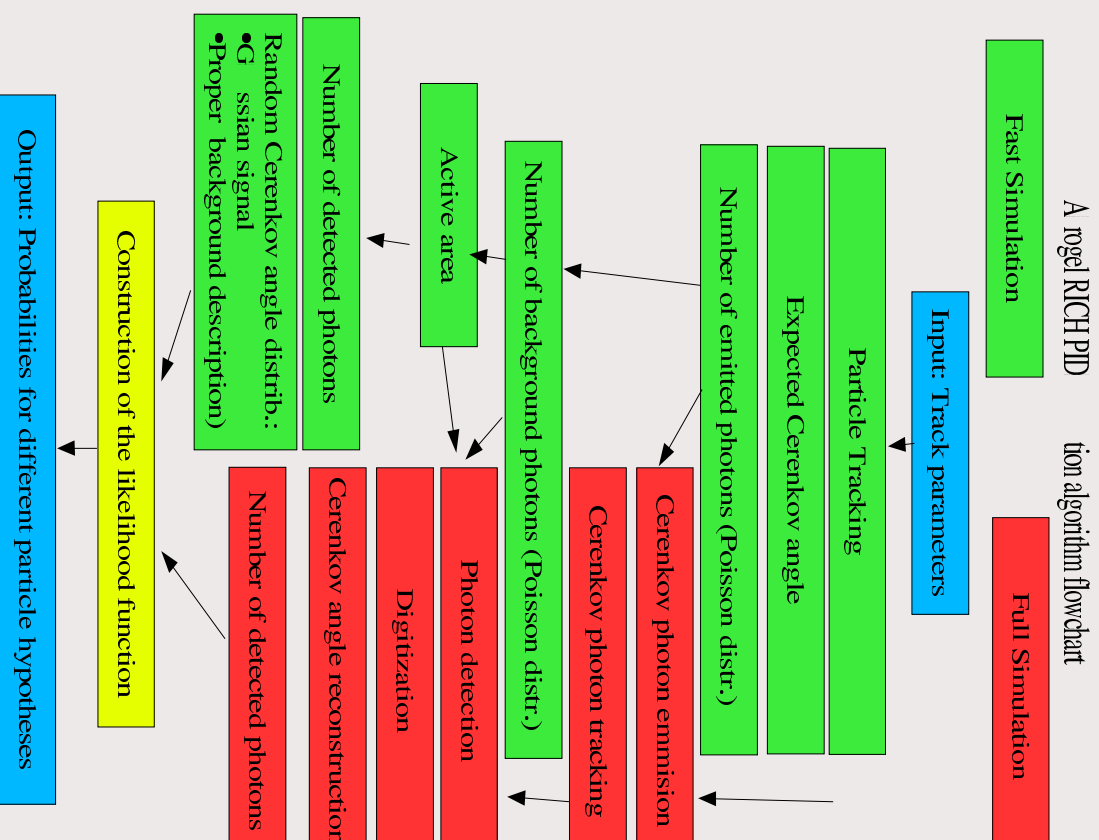

K -as- $K/all-K$

Fast simulation, some results

π/e separation

Timing, full simulation

Reference machine f9pc43.ijs.si

vendor id : AuthenticAMD

model name : AMD Athlon(tm) XP processor 2100+

cpu MHz : 1733.470

cache size : 256 KB

OS: RedHatLinux 8.0 kernel Linux release 2.4.18

compiler: gcc version 2.95.2

05/29 status

CPU usage for 10000 events:

Total 12.12 s

→ can be improved

07/30 status:

CPU usage for 10000 events:

Total 4 s
